F O R O R D .

I den 4de Aargang af Norsk meteorologisk Aarbog meddeles lagttagelser for det meteorologiske Aar 1869—70 for de samme Stationer som det forrige Aar og desuden for de nye Stationer Brönö, Florö, Leirdal, Elverum, samt for Tromsö.

I Christiansund var Barometret i Ustand fra Slutningen af Juli til Slutningen af August. Paa Dovre var det samme Tilfældet fra Slutningen af Juni til Midten af Juli. Efter endt Reparation bleve begge Stationers Barometre comparerede med Normalbarometer saavel i Christiania som paa Stationerne selv.

Paa Stationerne Vardö, Tromsö, Leirdal og Elverum mislykkedes Observationen af det vaade Thermometer i December. Gjennem nøjagtige Instructioner lykkedes det at bringe disse lagttagelser i Orden i Januar.

I Aalesund blev ved en Misforstaaelse Wind og Vejr ikke observeret gjennem hele Januar Maaned.

I Vardö er der i September kun observeret i de første Dage. For November mangler ganske lagttagelser. Instrumenterne vare flyttede over til Telegrafstationen, hvor lagttagelserne først kunde begynde i Midten af December 1870. Barometrets Höjde er nöiagtig den samme som förr.

I Tromsö var Barometrets Höjde fra 5te August 1869 til og med 2ode August 1870 15.3 Meter. Senere er Höjden som tidligere 12.2 Meter.

I Leirdal observeres ikke om Söndagen.

P R É F A C E .

Dans le 4ième tome des annales de l'institut météorologique de Norvège sont données les observations pour l'année météorologique de 1869—70 des mêmes stations que pour l'année précédente et de plus pour les stations nouvelles de Brönö, de Florö, de Leirdal, d'Elverum et enfin pour Tromsö.

A Christiansund le baromètre était hors d'état depuis la fin de juillet jusqu'à la fin d'août. A Dovre le même était le cas depuis la fin de juin jusqu'au milieu de juillet. Les baromètres réparés des deux stations ont été comparés aux baromètres étalons à Christiania et aux stations mêmes.

Aux stations de Vardö, de Tromsö, de Leirdal et d'Elverum l'observation du thermomètre mouillé n'a pas réussi dans le mois de décembre. Par des instructions détaillées il a réussi de rétablir ces observations en janvier.

A Aalesund, par une méprise, le vent et l'état du ciel n'ont pas été observés pendant tout le mois de janvier.

A Vardö on n'a observé en septembre que pendant les premiers jours. Pour novembre les observations font tout-à-fait défaut. Les instruments étaient transportés au bureau télégraphique, où les observations ne pouvaient commencer qu'au milieu de décembre 1870. La hauteur du baromètre est restée la même.

A Tromsö la hauteur du baromètre, depuis le 5 août 1869 jusqu'au 20 août 1870, était de 15.3 mètres. Depuis ce temps la hauteur est de 12.2 mètres comme auparavant.

A Leirdal on n'observe pas le dimanche.

Tabellerne, der indeholde Observationerne for det meteorologiske Aar 1869—70, give for hver Station og Maaned:

- 1) Barometerhöjden i Millimeter, rettet for Instrumenternes Fejl og reduceret til 0° C., men ikke til Havets Overflade.
- 2) Lustens Temperatur efter det hundredgradige Thermometer. Temperaturer over 0° staa uden Fortegn.
- 3) Vanddampenes Tryk i Millimeter.
- 4) Den relative Fugtighed i Procenter.
- 5) Vindens Retning (retvisende) og Styrke. Styrken er betegnet efter følgende Scala: 0 = Stille; 1 = svag; 2 = laber, frisk Bris; 3 = frisk (Kuling); 4 = sterk; 5 = Storm; 6 = orkanagtig Storm.
- 6) Skydekket. 0 = klart; 10 = overskyet.
- 7) Nedbör. Regn eller Sne (smeltet) — Höjden i Millimeter.
- 8) Anmerkninger.

Tabellerne for Christiania indeholde desuden:

- i 2den Rubrik. Den laveste og höjeste Temperatur i Dögnet. Naar Temperaturen i hele Dögnet har stadtig steget eller faldt, staar denne Rubrik blank.
 - i 5te - Vindens Middelhastighed i Dögnet, regnet fra Kl. 10 Formiddag, udtrykt i Kilometer i Timen.
 - i 6te - De överste Skyers Drift, regnet som Vinden.
 - i 7de - Himmelens Udseende, Nedbör, Skyernes Form og Skydeketsk Störelse.
- Den nederste Horizontalrække indeholder de maanedlige Middeltal og den samlede Regnhöjde.

H. M O H N.

Les tableaux qui contiennent les observations de l'année météorologique de 1869—70 donnent pour chaque station et chaque mois:

- 1° La hauteur barométrique en millimètres corrigée des erreurs des instruments et réduite à 0° , mais sans réduction au niveau de la mer.
- 2° La température de l'air d'après le thermomètre centigrade. On a omis le signe +.
- 3° La tension de la vapeur d'eau en millimètres.
- 4° L'état hygrométrique en centièmes.
- 5° La direction vraie et la force du vent. Les désignations pour la force sont les suivantes: 0 = calme; 1 = faible; 2 = modéré; 3 = assez fort; 4 = fort; 5 = très-fort; 6 = tempête ou ouragan.
- 6° La quantité des nuages. 0 = serein; 10 = couvert.
- 7° La hauteur de pluie (ou de neige fondue) en millimètres.
- 8° Des remarques.

Les tableaux pour Christiania contiennent de plus:

- Colonne 2. Les températures minima et maxima du jour. Quand la température pendant tout le jour a été continuellement en montant ou en baissant, cette colonne reste en blanc.
- 5. La vitesse moyenne du vent pendant le jour, exprimée en kilomètres à l'heure. Le commencement du jour est à 10 heures du matin.
- 6. La direction du mouvement des nuages supérieurs exprimée comme celle du vent.
- 7. L'état du ciel, les météores aqueuses, la forme et la quantité des nuages.

La dernière ligne horizontale contient les moyennes mensuelles et la quantité totale de la pluie.

1) 10^{1/4}—2^{1/2}, Storm og Regn. R. e. 2) Den 28de Marts kl. 8—9 aft. sterke Nordlys paa den nordlige Himmel. Det dannede en Bue fra Ost mod Vest, hvorfra udsendtes en Mængde flammeende Tunger, der gik mod Zenith. I Ost havde det en mørk rosenrød Farve og var kun lidet bevægeligt, medens de øvrige Del spillede i gult og svagt blaaligguld, grønt og var sterkt bevægelige.
